

What's Next?

Relentless innovation
in mixed-signal IC technology

To thrive, you must know what's next. To know, turn to Silicon Laboratories, the leader in design innovation.

Today's communications are driven by technology created at Silicon Laboratories, where superior engineering is emboldened by a unique management philosophy – a combination that has turned progressive companies into global industry leaders.

Silicon Laboratories' mixed-signal semiconductor solutions feature unprecedented levels of integration, the smallest die sizes in commercial use and implementation exclusively in standard CMOS. The result: faster time-to-market, increased margins and reduced resources required for new development. At Silicon Laboratories, relentless innovation meets sound business practice. This is the future of communications technology.
